

# RAMYA KOPPULA

Hyderabad, India | [koppula.ramya04@gmail.com](mailto:koppula.ramya04@gmail.com) | +91 9121077778 | [linkedin.com/in/koppula-ramya](https://linkedin.com/in/koppula-ramya)

## EDUCATION

### Malla Reddy College of Engineering and Technology

Bachelor of Technology, Information Technology

Hyderabad, India

2021 – 2025

## EXPERIENCE

### Data Analyst Intern

Oct – Dec 2025

SDN Sanitation Pvt. Ltd

Hyderabad, India

- Built Python/Pandas ETL pipelines to ingest, clean, and transform large operational datasets; debugged structural anomalies and data inconsistencies to ensure high accuracy and reliability of outputs.
- Engineered end-to-end data processing workflows that improved cross-team reporting efficiency; collaborated with cross-functional stakeholders to gather requirements and deliver consistent deliverables on deadline.
- Prepared analytical reports and visual summaries tracking operational performance patterns, translating raw data into actionable insights for business stakeholders across departments.
- Designed structured data pipelines supporting recurring reporting cycles, applying systematic validation and quality checks to maintain data integrity end-to-end.

### AI & Digital Literacy Intern

Nov – Dec 2025

Edunet Foundation (AICTE | IBM SkillsBuild)

Remote

- Completed AICTE-certified program covering AI fundamentals, ML workflows, and intelligent system design; applied structured analytical thinking to real-world case studies with emphasis on secure, dependable systems.
- Gained hands-on exposure to workflow design, prompt engineering, and data processing pipelines, reinforcing engineering discipline for building robust, production-grade solutions with focus on reliability.

## PROJECTS

### Reconstructing Old Photos using Deep Learning | Python, GANs, U-Net, TensorFlow, OpenCV

- Designed and implemented an end-to-end ML pipeline covering data ingestion, preprocessing, training, and evaluation; debugged model artifacts by analyzing intermediate outputs and applied iterative hyper-parameter tuning for high visual fidelity.
- Applied image preprocessing, noise reduction, and data augmentation to improve model generalization; delivered reliable, production-quality output through rigorous validation and performance benchmarking with minimal artifact noise.

### Organic & Recyclable Waste Classification | Python, Scikit-learn, Feature Engineering

- Built a modular supervised ML classification system; diagnosed and resolved performance bottlenecks via structured debugging and feature engineering, improving accuracy with minimal compatibility risk across dataset variations.
- Implemented a reusable end-to-end ML pipeline enabling rapid experimentation and model iteration; applied systematic evaluation workflows to validate correctness and reliability across diverse input conditions.

### Netflix Viewing History Analysis | Python, Pandas, Matplotlib, Seaborn

- Performed large-scale EDA on CSV datasets; handled missing values, datetime conversions, and multi-dimensional feature engineering across month, weekday, and content-type dimensions to produce clean, analysis-ready data structures.
- Built data visualizations surfacing watch-time trends and binge patterns, translating raw operational data into actionable business insights — mirroring telemetry and observability workflows in distributed systems.

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, R, HTML/CSS, MySQL

**Systems & Engineering:** Debugging & Root Cause Analysis, ETL Pipeline Design, End-to-End ML Systems, Data Structures & Algorithms, Distributed Data Workflows

**ML / AI:** Supervised & Unsupervised Learning, GANs, U-Net, Computer Vision, Feature Engineering, Hyper-parameter Tuning, Model Evaluation & Optimization

**Tools & Platforms:** Git, Jupyter Notebook, OpenCV, Scikit-learn, TensorFlow (Basic), Keras (Basic), Snowflake, Pandas, NumPy, Matplotlib, Seaborn

## CERTIFICATIONS

**IBM SkillsBuild – Data Analytics Fundamentals:** Data analysis, visualization, and analytical thinking on real-world datasets.

**Data Engineering – Snowflake:** Data pipelines, cloud data platforms, and structured data handling in enterprise environments.

**Data Analyst Certification – One Roadmap:** EDA, data cleaning, and Python-based visualization techniques.

**Accenture UK Developer & Technology Job Simulation – Forage:** Industry problem-solving workflows and technical case scenarios.

**CCNav7: Introduction to Networks – Cisco Networking Academy:** Networking fundamentals, IP addressing, and system communication protocols relevant to enterprise environments.
